## C.F. WEBER presents at Techtexsil 2024 New CORDURA® 560dtex TrueLock™ stock programme for military applications

C.F. WEBER GmbH Spitzkunnersdorf is responding to the increasing demand for quickly available trim and reinforcement materials for military applications by expanding its existing stock service programme to include special fabric solutions, typically used for ballistic vests, carrying/molle systems, holsters, bags and backpacks.

The proven, spun-dyed CORDURA® 560dtex TrueLock™ yarn from INVISTA® is used, which is initially available in the colours Coyote, Ranger Green and Black and whose advantage, even across batches, lies in the high colour continuity, which in turn ensures a uniform, homogeneous appearance.

The particularly hardwearing CORDURA® fabrics have the usual C.F. WEBER quality with a high-quality PU coating and FC impregnation and are available from stock in rolls of 50 running metres each. The range is rounded off by matching laser-cut laminates, which are given their typical C.F. WEBER pleasant feel and stability in a special doubling process, also available from stock in rolls of 25 linear metres.

C.F. WEBER is presenting this addition to its range for the first time at Techtexsil - Frankfurt am Main.
